

USA/UK

IMPORTANT

We strongly recommend to watch our installation videos and to read the complete instructions and warranty conditions on our website: www.berryalloc.com

BerryAlloc Grand Avenue must be installed as floating flooring which means that:

- The installation of the floor must be the last operation to be performed on the job site.
- The floorboards must not be screwed/glued to the subfloor or tacked/ glued/fixed to any fixed constructions (e.g. kitchen cabinets and freestanding cupboards are NOT to be installed on top of the flooring).
- Use compressible filler (BerryAlloc Filler/Wine) as termination towards the adjacent room or use of silicone
- Leave a 4-6 mm expansion to walls and other fixed constructions so that the flooring can move.
- In doorways, an area which does not join symmetrically and when the room length or width exceeds 15 m, the flooring has to be divided with expansion profiles.

BerryAlloc Grand Avenue can be installed on most hard subfloors, e.g. chip/ plaster boards, PVC or concrete (be sure that the existing subfloor construction is fixed). Soft material like a walk-to wall carpet needs to be removed. The subfloor has to be even (max 4 mm per 2 m), dry and clean. Sharp unevenness must be rubbed down and any holes filled. If the subfloor doesn't comply with the specified requirements for fitness you can experience squeaking noises in the flooring.

The subfloor must be totally dry when installing:

- Wooden and wood based material, max. 5% relative humidity
- Concrete and light concrete floor, max. 8% relative humidity or 2.0 CM % (1.8 CM % if floor heating)
- Plaster and plaster based floor, max. 0.5 CM % (0.3 CM % if floor heating)

Concrete/light concrete subfloors, ceramic tiles (despite of an integrated moisture barrier or if a floor covering is installed on top) and floor heating constructions in general have a moisture barrier. Use a non-aging PE-film with the thickness of min. 0,20 mm which is applied with a joint overlap of min. 20 cm, taped and turned up against the walls. Clean-cut the plastic foil when floor installation is finished.

NB: Do not use any additional underlay due to that this can result in a soft subfloor which can lead to joint openings and/or separation of the locking mechanism or squeaking floors.

FLOOR HEATING

After installation of BerryAlloc Grand Avenue a moisture barrier with a minimum thickness of 0,20 mm must be installed. All heating elements must be turned off during installation and the temperature of the subfloor must be between 18 and 20 °C. The maximum allowed surface temperature of BerryAlloc Grand Avenue is 27 °C.

Keep in mind that loose mats may function as heat accumulators and raise the temperature to more than the tolerated maximum surface temperature. Heated and non-heated flooring areas must be separated by expansion profiles.

Effekten av gulvvarmen kan öka översteg

• Elektrisk värme: 60 W/m² (PE-folie installeras direkt under BerryAlloc gulvet).

• Värmebärande värmeföljande och utgående vattentemperatur må regleras så att den inte översteg 27 °C.

• Varmvatten värmeföljande: Inn- och utgående vattentemperatur må regleras så att den inte översteg 27 °C. (RI-folier användas) (PE-folie installeras direkt under BerryAlloc gulvet).

The effect of the heating elements must not exceed:

- Heating element: 60 W/m² (PE-fol should be installed directly under the BerryAlloc flooring).
- Waterborne heating: Incoming/outgoing water temperature must be regulated so that the system power doesn't give surface temperatures above 27 °C. (In RI-folier användas) (PE-fol should be installed directly under the BerryAlloc flooring).

Regulation of the temperature after installation, or if the system has been turned off for a period of time:

- 1) The first week the heating should be left on low temperature, 18-22 °C
- 2) The second week the heating may be adjusted according to the above

VIKTIGT!

Vi anbefaler på det sterkeste å se de installasjonsvideoene og å lese hele installasjonsveiledningene og garantivilkårene på vår hjemmeside www.berryalloc.com

BerryAlloc Grand Avenue må legges flytende. Det betyr at:

- Installasjonen av gulvet må være den siste operasjonen som utføres på arbeidsplassen.
- Gulvet må ikke skrues/festes mot underlaget eller festes/klebes/festes mot andre fastpunkter (f.eks. kjøkkeninnredning og peisovner må ikke installeres oppå gulvet).
- Beryst kompressibel fyllingsmasse (BerryAlloc Filler/Wine) ved avslutning mot kam for det legges fyllingsmasse
- Det må finnes 4-6 mm avstand til vegger og andre faste konstruksjoner så at gulvet kan bevege seg.
- I døryannganger, ved usymmetrisk sammenhengende gulvflater og ved rom med gulløpinger/bredder over 15 m, så gulvflaten deles opp med ekspansjonsfliser.

BerryAlloc Grand Avenue kan legges oppå de fleste harde gulv, f.eks. gips/ plasteboard, PVC og betong (husk å sikre underlaget for knik). Myke underlag som vegg til vegg teppe og lignende må fjernes. Alle varmeelementer må være slått av under installasjonen, og temperaturen i underlaget må ligge mellom 18 og 20 °C. Overflate temperaturen på BerryAlloc Grand Avenue må ikke oversteg 27 °C.

Undergulv i betong/litbetong eller keramiske fliser (uansett om de har integrert fuktspær eller det er installert tillegg opply og generelt undergulv med gulvvarme leverer fuktspær. Bruk en alderbestandig PE-folie med en tykkelse på min. 0,20 mm, som legges med minst 20 cm overlapp til sluttene, teppe og høyere opp langs veggene. Plastfolien resirkuleres etter at gulvet er ferdig lagt.

NB: Det må ikke benyttes ekstra underlagsmaterie/for dette vidt vi girer underlaget for mykt som igrun kan resultere i faggløpninger og/eller lisseparesjoner eller art gulvet knarar.

GULVVARME

Før BerryAlloc Grand Avenue installeres skal legges ut en PE-folie med tykkelsen min. 0,20 mm, som fungerer som fuktspær. Alle varmeelementer må være slått av under installasjonen, og temperaturen i underlaget må ligge mellom 18 og 20 °C. Overflate temperaturen på BerryAlloc Grand Avenue må ikke oversteg 27 °C.

Husk at løse teppe vil fungere som varmeakkumulatører og muligens øke overflate temperaturen til mer enn det anbefalte maksimumet. Det må ikke finnes både varme og kalde områder innenfor et og samme gulvareal, uten at disse er avdelt med ekspansjonsfliser.

Effekten av gulvvarmen kan øke oversteg

- Elektrisk varme: 60 W/m² (PE-folie installeres direkte under BerryAlloc gulvet).
- Varmvatten värmeföljande: Inn- och utgående vattentemperatur må regleras så att den inte översteg 27 °C. (RI-folier användas) (PE-folie installeras direkt under BerryAlloc gulvet).

Reglering av temperaturen efter installation, eller hvis systemet har vært slått av en lengre periode:

- 1) Den første ukene settes varmen på lav temperatur, 18-22 °C
- 2) Påfølgende uke kan varmen reguleres etter ovenstående

Regulation of the temperature after installation, or if the system has been turned off for a period of time:

- 1) The first week the heating should be left on low temperature, 18-22 °C
- 2) The second week the heating may be adjusted according to the above

Regulation of the temperature after installation, or if the system has been turned off for a period of time:

SE

VIKTIKT!

Vi rekommenderar att se vår installationsvideo och att läsa den kompletta installationsanvisningen och garantivilkören på vår sida www.berryalloc.com

BerryAlloc Grand Avenue asennetaan aina "uukuksi lattaksi", mikä tarkoittaa sitä että:

- Lattianasetus tulee olla viimeinen tehtävä jotta suoritetaan työmäärä.
- Lattia ei saa ruuvata/limata alustallaan tai kiinnittää/kiilata/fiksa muuhin kiinteisiin rakenteisiin (esim. keuhkokuilut ja takat EI saa asettaa lattajalan päälle). Käytä täytinmassaa (BerryAlloc Filler/Wine) ennen sammumisen käyttöä. Käsiä lattiaan käytetään reunaan kohdalla.
- 4-6 mm muurankato on jätettävä lattia ja seinien, pilareiden ja muiden kiinteiden rakenteiden välille.
- Huoneiden väliseinissä julkisivossa, epäsymmetrisen huoneiden kohdalla ja mikäli huoneisiin asennettavan lattiayhteyksiä/ulostulojia 15 m on käytettävä liikkunassaikkaloita.

BerryAlloc Grand Avenue voidaan asentaa suoraan uusempien koviin alustoille, kuten lastu-, kipsilevyjen, muurauksen ja betonin päälle. Varmista ettei alusta on hyvin kiinteää. Pehmeät alustat, kuten spongikivipöly, PVC ja betongiläiskä on otettava huomioon. Käytä spongiin alustalle on pehkeästä. Alustallaan on otettava tasainen (hetto 2 mm matkalla enintään 4 mm), kuiva ja puhdas. Terävät epätasaisuudet hitaan tasauskei ja mahdolliset kovat tasot. Käytä täytinmassaa ei täytä asennettuja väliä. Käytä täytinmassaa ei täytä asennettuja väliä. Käytä täytinmassaa ei täytä asennettuja väliä. Käytä täytinmassaa ei täytä asennettuja väliä.

Undergulv av betong/litbetong eller keramiska plattor (oavsett om de har integrert fuktspær eller det er installert tillegg opply og generelt undergulv med gulvvarme leverer fuktspær. Bruk en alderbestandig PE-folie med en tykkelse på min. 0,20 mm, som legges med minst 20 cm overlapp til sluttene, teppe og høyere opp langs veggene. DE

WICHTIG!

Wir bitten Sie: schauen Sie sich unser Verlege-Video und die Garantiebestimmungen auf unserer Website www.berryalloc.com an.

BerryAlloc Grand Avenue muss schwimmend verlegt werden, das heißt:

- Bodenbelagsarbeiten sollen immer die letzte Aktion auf jeder Baustelle sein.
- Die Dielen dürfen nicht auf dem Unterboden oder an festen Bauteilen geklebt/befestigt werden. Z.B. Küchenschränke und Öfen sollen NICHT auf die Fläche gestellt werden! (Verwenden Sie ein breites unpoliertes Dichtungsmittel (Filler/Wine), statt Silikon, um Fugen auszufüllen.)
- Der Abstand an allen festen Bauteilen muss mindestens 4-6 mm betragen.
- In Türöffnungen und bei Bodenflächen die nicht symmetrisch aneinander anschließen, müssen Dichtungsmittel gesetzt werden. Gleiches gilt für geschlossene Räume, deren Maß 15 x 15 überschreitet.

BerryAlloc Grand Avenue kann auf festen Untergründen, wie z.B. Span-/Gipsplatten, PVC und Zementböden, verlegt werden. Alle Arten von teuren Bodenbelägen, müssen entfernt werden. Der Untergrund muss glatt, trocknig, eben (max. 4mm Höhenunterschied je 2 m), trocken und

We strongly recommend to watch our installation videos and to read the complete instructions and warranty conditions on our website: www.berryalloc.com

INSTALLATION INSTRUCTIONS

1. STORE THE FLOORBOARDS at room temperature for at least 48 hours, still in their packaging...

START IN THE LEFT CORNER. Place the floorboard with the aluminium strip on the long side...

ENDING THE ROW: Place the final floorboard faced down (aluminium strips facing the room) with the short side positioned 4-6 mm from the wall...

STARTING THE SECOND ROW: We advise that the end joints are staggered min. 1/3 of a floorboard...

INSTALLING THE NEXT BOARD: Place the long side of the floorboard (A) in an angle of +/- 20° into the aluminium strip of the floorboard in the previous row...

DISMANTLING THE FLOOR: Lift the floorboard row a few cm and slide it up with your fist along the long side joint...

INSTALLATIONSVORSCHRIFTEN

1. LAGERN DIE DIELEN mindestens 48 Stunden vor Verlegung in der ungeöffneten Verpackung bei Raumtemperatur...

BEGINNEN SIE IN DER LINKEN RAUMECKE, legen Sie die Dielen mit der Verbindung der Gehrleiste mit der rechten Hand gegen die Wand...

HEBELN SIE DIE NÄCHSTE DIELE schräg von oben in das kurze Dielelene ein und senken Sie auf der Boden ab.

DER ZWEITE REIHE: Achten Sie bitte darauf, dass die Stimmfugen in der 1/3 der Diele versetzt verlegt werden.

VERLEGENDE DER WEITEREN DIELEN: Platzieren Sie die neue Diele (A) in einem Winkel von +/- 20° in das LOC der bereits verlegten Dielen...

DE LASTE REIHE muss mehr als 5 cm breit sein. Messen und sägen Sie die Dielen, lassen Sie eine Fuge von 4-6 mm. Den Teil längs absägen...

DEMONTEREN SIE DIESEN: Heben Sie eine Dielenreihe ein paar Zentimeter an und klopfen Sie mit der Faust entlang der Längsseite...

FR NL IT ES RU PL

INSTRUCTIONS DE POSE

1. conservez les lames dans leur emballage fermé, au moins 48 heures, a température ambiante...

COMMENCER DANS LE COIN GAUCHE : placez la lame avec le côté long du loc orienté vers la gauche et posez les lames en partant de la gauche vers la droite...

TERMINER UNE RANGÉE : Placez la dernière lame, face décor orientée vers le bas (la face aluminium vers la chambre) côté court à 4-6 mm du mur...

COMMENCER LA DEUXIÈME RANGÉE : Utilisez une nouvelle lame que vous sciez en deux. Veillez à ce que le décalage des lames par rapport à la rangée qui précède soit toujours 1/3 d'une lame...

INSTALLATION DE LA LAME SUIVANTE : placez le côté long de la lame (A) à un angle de +/- 20° dans la rangée au-dessus...

LA DERNIÈRE RANGÉE doit avoir une largeur de min 5 cm. Mesurez et sciez la lame. Laissez un joint de 4-6 mm près du mur...

DÉMONTREZ LES LAMES : Soulever la dernière rangée de lames de quelques cm et retirez le côté long de la planche de la rangée précédente...

ISTRUZIONI PER L'INSTALLAZIONE

1. TENERE LE TAVOLE a temperatura ambiente per almeno 48 ore in confezione sigillata chiusa prima di iniziare la posa...

BEGINNARE DALL'ANGOLO SINISTRO: Posa le tavole con il listello rivolto verso il centro della stanza e posare nella direzione verso destra...

POSARE LA TAVOLA SUCCESSIVA: nel lato corto della tavola come mostrato nell'illustrazione. Assicurarsi di avere una giunzione solida tra i lati corti delle assi...

TERMINARE UNA RANGÉE : Posare l'ultima doga con il retro rivolto verso l'alto (striscie di alluminio di fronte alla parete) e il listello in alluminio verso la camera e la fiancata...

INSTALLAZIONE DELLA SECONDA FILA: Se è troppo corta, iniziare con una nuova tavola tagliata a metà. Assicurarsi sempre di ottenere un 1/3 di un tavolo di spazio tra i raccordi...

LA TAVOLA SUCCESSIVA: Appoggiare il lato lungo della tavola (A) inclinandola di circa 20° nell'incastro in alluminio della tavola della fila precedente...

LA DERNIÈRE RANGÉE deve avere una larghezza di almeno 5 cm. Misurare e tagliare la tavola. Lasciare 4-6 mm di spazio tra la tavola e la parete. Tagliare la parte eccedente dal lato dell'aggancio...

Инструкция по укладке

1. Перед началом укладки выдержите доски в их заводской упаковке минимум 48 часов при комнатной температуре...

НАЧАТЬ УКЛАДКУ НЕОБХОДИМО С ЛЕВОГО УГЛА помещения. Расположите перпендикулярно панели так, чтобы алюминий замок был сверху...

ПОСЛЕДУЮЩУЮ ДОГУ ПОСЛЕ НЕОБХОДИМО ПОЛНОСТЬЮ СОЕДИНИТЬ ПО КОРТКОЙ СТОРОНЕ С ПРЕДУДУЩЕЙ (как показано на рисунке). Убедитесь, что планки по короткой стороне плотно состыкованы между собой...

ПОСЛЕ ЗАВЕРШЕНИЯ РАБОТЫ ПО КОРТКОЙ СТОРОНЕ ДОЩКИ НЕОБХОДИМО СДЕЛАТЬ ПЛУТ ВЕРХНИЙ КОНЕЦ ДОЩКИ НА РАСТОЯНИИ 4-6 мм ОТ СТЕНЫ...

УКЛАДКА ПЕРВОГО РЯДА: положить планку декоративной стороной вниз (алюминиевый замок по направлению к стене)...

УКЛАДКА СЛЕДУЮЩЕЙ ДОШКИ: расположить планку (A) под углом +/- 20° к горизонтальной стороне предыдущего ряда...

УКЛАДКА ПОСЛЕДНЕГО РЯДА: ширина последнего ряда должна быть больше 5 см. Отмерьте и отрежьте доску. Оставьте зазор 4-6 мм от стены. Разрежьте от доски наружу перпендикулярно с половику.

INSTRUKCIJA MONTAŽU

1. DESKI PODŁOGOWE należy przechowywać w temperaturze pokojowej przez co najmniej 48 godzin...

START Z LEWEGO NARÓŻNIKA. Połozć deskę podłogową w kierunku pokoju i układaj w prawą stronę...

SŁOJENIE DRZEWIANYCH DESK: należy wykonać przesłonięcie krawędzi 4-6 mm. Jeśli deska jest nierówna, wyrysuj linię 4-6 mm od ściany...

UŁOŻENIE PIERWSZEGO RZĘDU: umieść deskę podłogową dekoracyjną stroną do dołu (aluminowy zamek skierowany w stronę ściany)...

UŁOŻENIE KOLEJNYCH DESK: umieść deskę podłogową pod kątem +/- 20° względem poprzedniej deski w tym samym kierunku...

OSTATNI RZĄD musi być szerokość większą niż 5 cm. Należy pamiętać o zachowaniu przerwy dylatacyjnej 4-6 mm pomiędzy ostatnim rzędem a ścianą...

DEMONTAŻ PODŁOGI: Podnieść cały rząd wybijając go z poprzedniego rzędu na długich bokach. Rząd paneli jest już odblokowany...
